

The following program calculates the total cost of an item, plus tax based on the customer's county of residence

Sample run:

Notes:

- In Scratch mathematics is performed as part of the "Operators" components
- Note that "typing" is automatic
- What happens if letters are entered for the cost? For example someone enters "Ten dollars" for the cost?
- Remember to run the Scratch environment in SCC 800 type: `\\csclab\scratch\scratch.exe`
